1) What is Padding:

Padding is the space between the content and border of an element. It creates space inside the box.

2. What is Border:

Border is the line that surrounds the padding and content of an element. It defines the outline of the box.

3. What is Margin:

Margin is space outside the border that separates elements from each other. It creates space outside the box.

4. What is Cascading:

Cascading Means CSS rules are applied based on priority and order when multiple style are applied to the same element.

5. What is specificity:

The specificity is the priority level of CSS selectors used to decide which style will apply.

* Inline CSS
* ID selector
* Class selector
* Element selector

6. What is order rule:

Order rule means that last declared CSS rule will override the previous one if they have the same specificity.

7. What is 'important rule'.

The !'important rule is used to give highest priority to a CSS property. This style will override all other CSS rule.
